

## Important Safety Tip

What you should know about... **Seasonal/Unoccupied Homes**

No matter how you heat your home, maintaining your heat to a certain level is critical. Freeze-ups in an occupied/empty or unoccupied dwelling or home can cause expensive losses. Water from broken pipes can flood a house in a matter of hours causing structural damage to the house and loss of personal property.

You may want to consider installing one of our remote tank monitors. See the enclosed brochure for more information.

You should also arrange for supervision of your home if you plan to be away from the premises for any length of time.

It is better to be safe than sorry.
